CONSTRUCTION PROCUREMENT AND CONTRACT ADMINISTRATION

COURSE SUMMARY

In basic terms Procurement is the process used to obtain construction projects. It involves the selection of a contractual framework that clearly identifies the structure of responsibilities and authorities for participants within the building process.

In short, contract administration involves the planning, negotiation, execution and performance of any contact with customers or vendors. The preparation and implementation of contracts has great potential for aligning mutually agreeable contracts that lead to positive business outcomes

COURSE OUTCOME

Upon completion of this course, participants will be able to:

- brief overview of procurement methods in construction.
- Understand the tendering practices in construction
- explain the role and obligations of parties in contract.
- understand the stages of contract administration under standard form of contract.
- understand the extent of power and liability of a Contract Administrator in supervision, site safety, advice, giving information, instructions etc.
